

Project Risk Management

Project Quality Assurance and Independent Verification and Validation (QA / IV&V)

You've heard of projects facing extensive time and cost over-runs, or ending up on a high-risk list. Futrend Technology has a solution to help you avoid the risk of expensive delays, negative attention, and even mission failure.

Futrend's QA / IV&V Services will start your project on the road to success by identifying problems before they occur and providing solutions to keep the initiative on-track.

- **Avoid time and cost over-runs**
- **Ensure alignment of system capabilities to your mission and objectives**
- **Confirm the end product meets the needs of your stakeholders**

Well-known research by The Standish Group (Chaos Report) indicates that 71 percent of IT projects wind up either cancelled or substantially late. Futrend uses proven criteria and an established process to evaluate each phase of the development life cycle, striving to **position your project among the 29 percent of successful software endeavors.**

By helping you answer questions critical to the execution of your project, we arm you with the information you need to establish an action plan before challenges impact your mission or budget.

1. Will you deliver the right system and satisfy user requirements?
2. How can you stay or get back on-track with your project?
3. Have you validated that the system meets your stakeholder's needs?

DO YOU NEED QA / IV&V SERVICES?

Investing in QA / IV&V helps you **meet objectives, satisfy end users, and prevent costly delays.**

If you need to keep mission-critical, deadline-driven projects on time and on budget, independent monitoring of status and deliverables from the outset helps your project team identify the challenges that could threaten success.
