

# Application Development

*Business-Centric High Quality Application Development Using SDLC Best Practice*

IT Is The Enabler

**F**our months into the development of your Public Health Tracking System, you discover the vendor used outdated technology, non-standard architecture, and inaccurate system requirements. Now you're in the red and six months behind schedule.

**Futrend's Application Development Services Team** excels throughout the Software Development Life Cycle (SDLC) from requirements analysis to application design and development to ongoing support with you, the business owner, in mind. Our services feature:

- Functional experts that understand your long-term goals and business processes, bringing the big picture needs of your program into articulate, event-oriented detail
- Developers that have domain knowledge in your business
- Project managers with expertise in proven technologies and methodologies

By strategically analyzing your organization, program needs and business processes, we develop an application that clearly meets your specific requirements and automates business functions. The **Futrend** team answers the questions critical to success from the beginning:

1. Does the application satisfy cross-functional demands and support mission-critical requirements?
2. Will the application comply with Federal application and security standards?
3. Have you validated that the system meets your stakeholders' needs?
4. Has the application been tested rigorously to ensure performance and usability?

## DO YOU NEED FUTREND'S APPLICATION DEVELOPMENT SERVICES?

Investing in professional Application Development Services helps you to achieve objectives, meet deadlines and prevent costly delays. Futrend has successfully developed dependable, high-quality Commercial-Off-the-Shelf (COTS) applications for the Federal government, enabling agencies to effectively automate mission-critical, deadline-driven projects on time and on budget. Application Development enables your program's success.
